## A DIGITAL COLLABORATION PLATFORM FOR **COORDINATED CARE**

**EASY TO IMPLEMENT. INTUITIVE TO USE.**

Multidisciplinary care teams can now easily overcome the difficulties of working remotely through a virtual collaboration platform – MedCom.

MedCom facilitates communication and collaboration of interdisciplinary care teams to make clinical decisions about patient cases. This digital solution enables multi-channel communication, secure sharing of clinical information and efficient review of cases for faster decision making by healthcare professionals.

MedCom is a secure web-based platform accessible via phone, tablet or laptop. It enables easy communication via video, chat and voice, and enhances collaboration as it allows:

Quick and easy scheduling of meetings

Efficient review of patient cases across care teams

Secure sharing of clinical information (files, images, videos)

Simple creation and recording of meeting minutes

### TRIED AND TESTED

The MedCom platform was created in 2018 by physicians, for physicians. Now, thanks to the partnership with Medtronic IHS, the platform will be available to support healthcare providers across EMEA.

This innovative solution has already been implemented in the Quirón Hospital in Madrid (Spain), where it actively supports over 25 committees from various departments (e.g, cardiology, oncology and traumatology) in optimising their daily patient case management.

### A DIGITAL HEALTH SOLUTION FOR HOSPITALS

We fully manage the implementation of the MedCom platform - from its set-up to go-live and beyond.

We organise remote trainings for users and provide teams with technical support.

Our solution, which can be up within one day, guarantees healthcare professionals an immediate access to all collaboration functionalities and is free of charge.

## WHY IS MEDCOM NEEDED DURING THE COVID-19 CRISIS AND BEYOND?

Healthcare professionals face the challenge of providing the best possible care for complex patients (e.g. cardiology, oncology). This requires intensive communication and coordination between multiple care specialists at the same time.

During the COVID-19 crisis, healthcare professionals are deployed in different departments, geographical locations or remain at home (quarantine prevention), which hinders the cooperation and sharing of knowledge necessary to make decisions on urgent clinical cases.

## WHAT ARE THE BENEFITS OF USING MEDCOM?

### FOR HOSPITALS:

- **One place for teamwork** - one platform for digital handling of all patients' cases that can be integrated to hospital system
- **Lower risk** to be exposed to COVID-19 in the hospital for patients and physicians.
- **Fully secured** information exchange as the data is protected according to the European Data Protection Regulation

### FOR HEALTHCARE PROFESSIONALS:

- **Optimised case coordination** due to easier sharing of information on clinical cases
- **Optimised patient case management** due to traceability of decision-making process and supporting clinical data

### FOR PATIENTS:

- **High quality of treatment** as patient's case is treated with all relevant stakeholders
- **Better patient's experience** as they receive treatment in a timely manner
